Anni Frid Lyngstad, Chemistry Tonight

Anni Frid Lyngstad Miscellaneous **Chemistry Tonight** No rain but I felt the thunder You came and my ship went under With a white light shattering the night As you smiled like you do I could take evasive action But I need the satisfaction And I know, oh I could learn a lot From someone like you Who knows what will happen I'll keep my fingers crossed and Hope for some reaction Here it goes, it's chemistry tonight

My eyes are open
All the electricity seems right
I can feel a change in me
It's chemistry tonight
I know that I'm onto something special
Writing on the wall in neonlight
Telling me it's got to be
It's chemistry tonight

You turn and you look
Right through me
You know what you're
Doing to me
Very slow, oh I just can't erase
This smile from my face
I'm sure we could be terrific
So pure that it's scientific
'Cos it's true, ooh everything
We do falls right into place
Can't wait for the darkness
I'm lying in the bath
I turn on my radio
I know, there's chemistry tonight

My eyes are open
All the electricity seems right
I can feel a change in me
It's chemistry tonight
I know that I'm onto something special
Writing on the wall in neonlight
Telling me it's got to be
It's chemistry tonight

One kiss and you start a fire
One sip from your loving cup
Can take me high
My body's burning up
When you do like you do
I feel silent somehow
Feel you closer now
We may discover something
Maybe, it's chemistry tonight

My eyes are open All the electricity seems right I can feel a change in me It's chemistry tonight (chemistry tonight) I know that I'm onto something special (chemistry tonight) Writing on the wall in neonlight (chemistry tonight) Telling me it's got to be It's chemistry tonight (chemistry tonight)

My eyes are open
All the electricity seems right
I can feel a change in me
It's chemistry tonight (chemistry tonight)
I know that I'm onto something special (chemistry tonight)
Writing on the wall in neonlight (chemistry tonight)
Telling me it's got to be
It's chemistry tonight (chemistry tonight)
