

Saxon, Super Nova

Deep inside the Heavens, far across the Milky Way
The star that shines the brightest in the sky is ready to explode!
Lighting up the universe, implosion of the core
Planets turn, planets die in this celestial war

Supernova (hotter than the sun!)
Supernova (destruction has begun!)
Supernova (lighting up the sky!)
Supernova (the planet's turn to die!)

The shockwaves cross the universe, spreading out in mighty cosmic waves
Four hundred distant light years they will travel before we see that day
A hundred million times brighter than the sun
The power of the nebula, the end has just begun

Supernova (hotter than the sun!)
Supernova (destruction has begun!)
Supernova (lighting up the sky!)
Supernova (the planet's turn to die!)

Burning star's shattered light, then becomes a galaxy's black hole
Defying laws of gravity, pulling all into its deadly soul
From far across the universe, we glimpse a dying sun
Releasing bursts of energy into this cosmic war

Supernova (hotter than the sun!)
Supernova (destruction has begun!)
Supernova (lighting up the sky!)
Supernova (the sun is gonna die!)
Supernova
Supernova
